Valid French residence permit: Passeport talent - EU Blue Card

PROFESSIONAL EXPERIENCE

Amazon Web Services (AWS) | Delivery Consultant AI/ML, ProServe — May - Oct 2026

- Led **discovery and solution architecture** with three enterprise clients, agreeing goals, constraints and delivery expectations; implemented solutions with AWS partner engineers and documented architecture and deployment decisions.
- Built a **multi-tenant agent pilot** using Strands, Bedrock/AgentCore and A2A, with **user-scoped authorization**, tenant isolation, approved-region storage/inference, encryption and private networking; implemented prompt-injection/API-abuse controls and supported client assurance with control documentation, demonstrations and security test reports.

Independent Consulting | AI/ML Consultant — Jun 2023 - May 2026

Supportful — Dec 2025 - May 2026

- Delivered a **production LangGraph sales copilot** for lead qualification via Salesforce/Gmail and human-reviewed Slack drafts; deployed with **Terraform on AWS**, isolating tenant databases and vector stores for sales teams.
- Built a **production Salesforce MCP server (Python/FastMCP)** for permission-aware CRM actions; engineered agent state and memory, retries/timeouts, recovery, human approvals and stopping conditions, reducing manual CRM work.
- Built **evaluation sets with reference answers**, LLM-as-a-judge assessment and human review; an agent generated candidate cases and expected answers from client data, with test coverage extended from real user interactions.
- Co-built a restricted-access portal for client engagement tracking; demos contributed to **signed new contracts**.
- Delivered a **live telephone booking agent** and web/WhatsApp agents for bookings and payments; Arabic support, human handoff, LangSmith evaluations and **interactive React charts from managers' natural-language questions**.

MOPO — Jun 2023 - Jan 2026

- Built the business case and led **multi-LLM knowledge and customer workflows from concept to production**; profiled and parallelised independent steps after client feedback, reducing latency and cost while preserving answer quality.
- Migrated a single-EC2 backend to **Docker services on ECS behind an Elastic Load Balancer**, with Terraform, traffic-based scaling and CI/CD for zero-downtime deployments, aligning capacity and infrastructure costs with demand.
- Owned monitoring, **production incidents and fixes through client retesting**; onboarded **two engineers** through working sessions, architecture/decision records and deployment instructions. **Product acquired by Act-On in Jan 2026.**

MinervaHub — Apr - Jun 2025

- Assessed knowledge-sharing needs across **25 fashion and luxury companies**; co-developed a portal blueprint, user journeys, access requirements, Azure architecture options and a roadmap for next-phase priorities and budgets.

TowardsChange — Sep - Nov 2024

- Shipped **Python/FastAPI services** and hybrid Azure AI Search retrieval for **FridayGPT in production**. Separately piloted self-hosted Mistral on client GPUs to keep documents and inference on premises under client hosting policy.

AI.skilled: Guided three engineers on architecture and delivery; helped deploy the full **Gemini-powered product on GCP**.

SAVENCIA | Data Scientist Intern — Jul - Dec 2025

- Applied **causal inference** to lactoferrin yields (DoubleML, causal forests, Databricks); discussed assumptions and findings with R&D and engineering to demonstrate industrial value and support the case for greater data science investment.

Mobile Arts | Machine Learning Specialist — Jun 2022 - Aug 2023

- Built a SageMaker allocation engine delivering **30% higher ad revenue** than manual allocation in a **controlled A/B test**; added Lambda alerts with DynamoDB, EFS and SQS to track media-buying performance and earnings per click.
- Captured client needs; built Angular/.NET moderation with Amazon Rekognition and YOLOv8 logo detection on EC2.

Decentra Tech | Computer Vision Developer — May 2021 - May 2022

- Fine-tuned and pruned YOLO with NVIDIA TAO to **60 FPS on Jetson Nano**; deployed DeepStream collision warnings and lane/sign detection on **Nano/Orin in vehicles**, with detection/segmentation models trained on AWS GPUs.

EDUCATION

emlyon business school | Master in Data Science & Artificial Intelligence Strategy — 2024 - 2026

McGill University exchange | Montréal, Canada (2025) — LIFE Lebanon Scholarship

Université Saint-Joseph (ESIB) | Software Engineering Degree — 2018 - 2023

TECHNICAL SKILLS AND CERTIFICATIONS

Software: Python, TypeScript, SQL, FastAPI, React, Next.js, PostgreSQL, PyTorch; REST APIs and secure integrations.
Agents: Strands Agents, LangGraph/LangChain, MCP/FastMCP, A2A, RAG, context management, guardrails, LangSmith.
Cloud and production: AWS, GCP, Azure; Docker, Terraform, CI/CD, automated tests, monitoring, MLflow, Arize.
Coding-agent workflows: Research, scoped tasks and focused context; parallel delegation, review of code, security, maintainability and edge cases, integration with explicit and implicit project conventions, and tests before pull requests.
AWS: Solutions Architect - Associate · Machine Learning - Specialty · AI Practitioner · Cloud Practitioner | **Azure** AZ-900 / AI-900 / DP-900
Claude Certified Architect - Foundations (Anthropic) · **PMP (PMI)** | Training: TensorFlow Developer · Stanford ML

LEADERSHIP AND RECOGNITION

Workshops delivered: BERT/SageMaker at BDD (~150), AWS NLP, USEK students/staff (20+/session). **Speaker/co-host:** AWS re:Invent re:Cap. AWS Stockholm bootcamp, OpenAI/NVIDIA workshops, Paris Tech Summit participant.
Judge: Startup Weekend Support (2024), EPITECH GenAI projects (2025). **Elected VP**, ESIB student committee.
Languages: French (fluent) English (fluent) Arabic (native)
